Indicator	Value
Summary of the content moderation engaged in at the providers' own initiative	We employ a multi-layered content moderation approach combining automated filtering systems, manual review processes, and user reporting mechanisms. Our T&C clearly indicate what content is not allowed. Violations may lead to content removal, reduced visibility, or even account suspension or termination depending on the severity and frequency of the issue.
Meaningful and comprehensible information regarding content moderation engaged in at the providers' own initiative	Keyword filtering: Automated flagging of listings containing specific keywords or patterns for human review Manual review: All moderation decisions are made by human moderators following established policies User reports: Community-assisted moderation where user reports trigger prioritized human review Targeted investigations: Scheduled and ad-hoc human reviews of specific categories or content patterns
Qualitative description of the automated means	We use automated systems for content moderation to maintain a safe and trustworthy platform. Flag listings containing specific keywords or patterns for human review Sort and prioritize content for manual review based on risk assessment Help queue management for our human moderation team Identify potential policy violations for human evaluation
Qualitative description of indicators of accuracy and possible rate of error of automated means	Our automated systems maintain high accuracy, with continuous monitoring through true/false positive tracking. We improve performance through context-based rules, periodic sampling of unflagged content, and user reports analysis. Human moderators provide essential feedback on filter performance and address nuanced content that automation may misinterpret. We regularly update keyword lists based on identified gaps and emerging trends. This iterative improvement process enhances our ability to flag potentially non-compliant content while ensuring efficient human review allocation.
Specification of the precise purposes to apply automated means	Our automatic means serve to: - Identify potentially problematic content for human review - Assist in prioritizing which content requires immediate attention - Complement user reports in identifying policy violations

Safeguards applied to the use of automated means	We ensure high confidence in our automated filters through rigorous testing before launch and regular post-launch audits. • All moderation decisions require human review • No automated content removal • Regular keyword list updates • Clear user appeal process • Transparent moderation communication
