

DSA Transparency Report

17 February 2025 – 31 December 2025
Version 2 (Published on 6 March 2026)

Epic Games

Epic Games is a leading interactive entertainment company and provider of 3D engine technology. Epic operates Fortnite, Fall Guys, and Rocket League, as well as Unreal Engine, Unreal Editor for Fortnite (UEFN), Epic Online Services, Epic Games Store, and digital asset marketplaces such as Fab and ArtStation. Through these experiences, tools and services, Epic provides an end-to-end digital ecosystem where you can play, build, distribute and operate games and other digital content.

Epic's Approach to Online Safety

To create a welcoming experience for everyone, we set clear expectations for the behavior and content in our ecosystem and take action against those who violate our rules. We also implement default safety settings for our youngest players, and provide tools for players, parents and developers to manage their experience.

Our Rules

We have [Community Rules](#) that set clear guidelines for how we expect all players to behave inside our ecosystem. We also have [Content Guidelines](#) with details on content that we do not allow in our different experiences, services and marketplaces.

Default Safety and Privacy Settings

We design default safety and privacy settings in all our games to help create a safe environment for our youngest players from the outset. For example, for players under 18, voice and text chat default to "Off", [voice and text reporting](#) are always "On" and player profile details are hidden. In Fortnite text chats, the Personal Information filter is default "On" for players under 18 and the Mature Language filter is default "On" for players under 16.

For Fortnite players under 13, the Personal Information and Mature Language text chat filters are always "On" and a Parental Controls PIN is required by default to add new friends.

Additionally, players under 13 have a maximum chat setting of "Friends, team members and connections," and players under 10 have a maximum setting of "Friends Only" in Fortnite, Rocket League and Fall Guys.

Cabined Accounts

[Cabined Accounts](#) are Epic accounts designed to create a safe and inclusive space for players under the age of 13 or their country's age of digital consent. Players with Cabined Accounts can still play Fortnite, Rocket League, and Fall Guys, but are not able to access certain features such as voice chat, text chat, purchasing items with real money, and custom display names until their parent or guardian provides verified consent.

Parental Controls

Our [Parental Controls](#) enable parents and guardians to choose how their child plays and interacts across Epic's games and experiences. More than a dozen granular controls and settings let parents and guardians

manage access to social features such as voice and text chat, and set purchasing permissions, age-rating restrictions, Fortnite Time Limit Controls and more.

Moderation

We use automated solutions and human moderators to enable fast moderation, globally. Users can submit evidence-based in-game reports for suspected rule violations, and the consequences for confirmed violations of our rules range from a warning up to and including permanent account bans.

Our systems also automatically detect categories of potentially high-harm interactions, including self-harm, child endangerment, and threats of real-world violence, in text chat and submit a report to Epic for review. Confirmed violations result in escalation to law enforcement and account bans.

Digital Services Act (DSA) Report

The Epic Games DSA report includes information on our processes and global moderation data for the services listed below during the period from 17 February 2025 to 31 December 2025. This report includes moderation data as required by the DSA and does not include data relating to all moderation activities carried out by Epic during the reporting period which fall outside the scope of DSA. For example, the data in this report does not reflect sanctions for cheating and account security rule violations, or when content that violates our rules is rejected prior to being published.

Epic is publishing this report for the following services within scope of the DSA: [ArtStation](#), [Epic Developer Community](#), [Epic Games Store](#), [Epic Online Services](#) (including [Epic Online Services Developer Portal](#)), [Epic Pro Support](#), [Fab](#), [Fall Guys](#), [Fortnite](#) (including [Fortnite.com](#), [Fortnite Creator Portal](#) and [Unreal Editor for Fortnite \[UEFN\]](#)), [Fortnite Communities](#), [Kids Web Services](#), [MetaHuman Creator](#), [Postparty](#), [RealityScan](#), [Rocket League](#), [Sketchfab](#), [Persistent Text Chat](#)¹ and [Twinmotion Cloud](#). This Transparency Report is responsive to the obligations under DSA Article 15(1) and Article 24(1) for the applicable services or product features.

Global data for the entire reporting period is available in the [Transparency Report Data](#) section below. In accordance with the DSA implementing regulation that went into effect on 1 July 2025, data for the period 1 July 2025 - 31 December 2025 is available as CSV files.

¹Persistent Text Chat launched in December 2025 in the Epic Games Store, Epic Games app and Fortnite (direct messages and group chats).

Table of Contents

- 1. Own-Initiative Moderation**
- 2. Own-Initiative Moderation Sanctions**
- 3. Alleged Illegal Content or Behavior Reports**
- 4. Appeals**
- 5. Orders Received from Government Authorities (EU Member States)**
- 6. Out of Court Dispute Settlements and Suspensions**
- 7. Transparency Report Data**

1. Own-Initiative Moderation

Moderating player behavior

Players can use in-game mechanisms to mute, block and report inappropriate behavior in Fortnite, Rocket League and Fall Guys. In addition, voice and text chat reporting enables players to submit evidence to Epic for suspected violations of our [Community Rules](#).

We conduct automated and human review of these evidence-based reports and take action against players using chat to engage in inappropriate behavior.

In addition, we have a Personal Information text chat filter that helps remove certain types of information — like email addresses and credit card numbers — from text chat messages before they are delivered. We also have a Mature Language filter that replaces mature language including profanity, hate speech and toxicity with emojis in real time. Both filters are always on for players under 13 and always on for all players in Fortnite Game chats. During the reporting period, we filtered millions of text chat messages before they were delivered in Fortnite. Data reported in the annexes does not reflect text chat filtration.

Moderating Fortnite Islands

As of February 2026, you can play over 345,000 games and experiences (we call them Islands) within Fortnite. Some Islands are made by Epic, and thousands are made by other developers and brands. All Fortnite Islands are moderated using a combination of automated and human review, before they are published and made available to players. We review around 5,000 Fortnite Islands per day. When violative content is identified, the Island is rejected from the publishing flow and is not publicly available. Players can also report published islands for suspected violations of Epic's rules. Moderators review reported islands, and, if violative content is found, the island is removed. Developers who violate our rules are subject to sanctions, all the way up to a permanent account ban. Data reported in the annexes does not reflect pre-publication rejections.

Moderating Epic's marketplaces and services

Epic's marketplaces and services that host content that's created by artists and developers use a combination of automated review (including hash-matching technologies, as described below), community reports, and human moderators to identify violative content. When rule violations are detected, we take action to remove the offending content from our ecosystem, and the artists and developers are subject to sanctions.

Automated tools

Potentially violative content and behavior flagged by our machine learning classifiers is either removed automatically or sent to our team of human moderators for further review. Our team of trained moderators reviews content and considers each situation contextually and carefully before sanctions are applied. We leverage machine learning to provide several tools that facilitate human moderation including language translation, image highlighting, and similarity analysis.

Some examples of how we use our tools for automated moderation include:

- Moderating display names and team names for potentially violative content.
- Filtering Fortnite text chats for mature language and personal information.
- Detecting and reporting threats of real-world violence, child endangerment, and self-harm in text chat conversations to Epic for review. Automated text reporting for these high harm categories is always on in Fortnite Game chats and text conversations that include players under 18.
- Reviewing voice and text reports for potential violations of our rules and, in cases where our models have very high precision, applying sanctions.
- Reviewing images and text descriptions on Fortnite developer Islands, and seller profiles and product listings on our marketplaces, to identify rule violations, including spam, misleading images and intellectual property infringements.
- Filtering Epic Online Services status messages for potentially violative content and replacing it with asterisks.
- Using hash-matching technologies and image scanning, including through third party solutions such as [PhotoDNA](#), to help detect and prevent the distribution of child sexual abuse and exploitation material (CSAM). When Epic detects CSAM on our services, we report it to the National Center for Missing and Exploited Children (NCMEC) and take appropriate action.

Improving our machine learning models

We use safeguards to ensure our machine learning models are accurate, including using human moderation decisions to improve our ability to accurately detect and action rule breaking content and behavior across Epic's ecosystem.

Tools and training for Epic's moderation teams

Epic provides extensive tools and continuous training to assist our moderation teams. We have built specialized tooling to moderate content and behavior across Epic's experiences, services, and marketplaces. Training is required for all moderator roles and covers Epic's processes for reviewing content. We use quality control processes, including quality sampling and regular calibration sessions, to improve moderator accuracy. These calibration insights help clarify policies and identify training needs for moderation teams.

2. Own-Initiative Moderation Sanctions

This section describes the types of restrictions we impose on user accounts and content as a result of moderation carried out on our own initiative. Moderation actions for reports of illegal activity are described in Section 3 and Member State orders are described in Section 5.

Sanctions

Epic carries out a number of actions (or sanctions) on an account or piece of content when a violation of our rules is confirmed. Sanctions can vary depending on the severity of the violation and the number of previous sanctions a user has received. The sanctions we apply can be temporary or permanent. Sanctions can include:

Content takedowns

Content takedowns refer to the removal of content once published on the service; it does not include pre-publication rejections of content (such as developer island rejections in Fortnite) or text chat filtration, which occurs before a message is delivered.

Service restrictions

Service restrictions temporarily or permanently restrict access to tools and features within a product, restrict access to specific Epic products, or restrict access to a user's Epic account.

The number and type of sanctions we impose as part of our moderation activities are available in [Transparency Report Data](#).

3. Alleged Illegal Content or Behavior Reports

Article 16 of the DSA requires that Epic provide a mechanism where anyone can report alleged illegal content or behavior on its services. Our team of moderators reviews reports of illegal activity.

We reviewed all 10,430 alleged illegal content and behavior reports during the reporting period, and actioned 1,898. When Epic reviews content identified in these reports, it does so holistically against Epic's policies. If Epic actions reported content, frequently this is done for reasons *other than* the reasons alleged in the original report.

See [Transparency Report Data](#) for a breakdown per product.

Trusted Flaggers

In accordance with Article 22 of the DSA, Trusted Flaggers can submit reports to Epic which are prioritized and routed to our human moderators for review. Epic did not receive any notices from Trusted Flaggers for the reporting period.

4. Appeals

Epic allows sanctioned users and reporters to appeal a sanction decision if they believe a mistake was made during moderation. Users can submit one appeal for each eligible sanction.

The process consists of three phases:

- **Submission:** Users request an appeal via our Appeals Portal or via a [support request](#) in select cases.
- **Review:** A human moderator will review the appeal and may contact the requestor for additional information.
- **Decision:** Following review, we make a decision regarding the appeal request. We notify users regarding the outcome of the appeal through email. Users can follow the status of their appeals in either the [Sanctions and Appeals page](#) or via their support ticket. The moderation decision will be upheld if the original sanction was appropriately applied. It will be lifted if the sanction imposed was

inaccurately applied. It will be modified if during the review a more suitable sanction is identified for the violation that occurred.

We report on the number of appeals and the action we take in response to those appeals, in [Transparency Report Data](#).

5. Orders Received from Government Authorities (EU Member States)

The DSA requires Epic to report the number of orders it receives from EU Member State authorities issued in accordance with Articles 9 and 10 of the DSA. Epic did not receive any orders issued under Article 9 or 10 of the DSA for the reporting period.

The European Commission's Implementing Regulation, effective 1 July 2025, clarifies that reporting must include *all* orders from EU Member State authorities to act against illegal content and to provide specific user information, even where those orders are not issued pursuant to Article 9 or 10 of the DSA. For the period from 1 July 2025 to 31 December 2025, Epic did not receive any orders to act against illegal content and received 111 orders to provide specific information about recipients of its services. Further details are provided in the CSV files relating to Member State Orders, available in [Transparency Report Data](#).

6. Out-of-Court Dispute Settlement and Suspensions

Out-of-court dispute settlement

For some Epic services, users in the European Union may refer unresolved disputes regarding Epic's content moderation decisions to certified out-of-court dispute settlement bodies pursuant to Article 21 of the DSA.

Between 17 February and 31 December 2025, Epic Games received four requests to resolve disputes pursuant to Article 21. As of 31 December 2025, three of those disputes have been resolved, and one dispute is pending a decision. For further information, refer to the CSV files relevant to Appeals and Recidivism available in [Transparency Report Data](#).

Suspensions for repeat offenders

The DSA requires that Epic report the number of suspensions imposed in accordance with Article 23, which includes suspensions for frequently providing manifestly illegal content and for frequently submitting manifestly unfounded notices or complaints. Epic did not impose any suspensions pursuant to Article 23.1 of the DSA for repeat offenders of manifestly illegal content because a single violation leads to a permanent account ban. Epic did not impose any suspensions for Article 23.2 of the DSA for frequently submitting manifestly unfounded notices or complaints.

7. Transparency Report Data

Information about alleged illegal activity reports, sanctions, appeals, and automated decisions globally is available below. The data relevant to the 17 February 2025 to 31 December 2025 reporting period is available as a PDF report. In accordance with the DSA implementing regulation that went into effect on 1 July 2025, data from 1 July 2025 - 31 December 2025 is also available as CSV files.

[17 February 2025 - 31 December 2025 Data \(PDF\)](#)

1 July 2025 - 31 December 2025 Data (CSV)

Service type	Service
Games	Fortnite
	Fall Guys
	Rocket League
Marketplaces	Epic Games Store
	Fab
	Sketchfab
	ArtStation
Developer Tools	MetaHuman Creator
	Twinmotion Cloud
	RealityScan

	Postparty
	Kids Web Services
	Epic Online Services
Community Forums	Epic Developer Community
	Epic Pro Support
	Fortnite Communities
Other	Epic Display Names
	Persistent Text Chat

We originally published this DSA transparency report for the period 17 February 2025 - 31 December 2025 on 27 February 2026 ([archive](#)). On 6 March 2026, we republished this report with the .CSV files covering the period 1 July 2025 - 31 December 2025. This updated report also reflects in Annex B that two reports that were previously reflected as having been human reviewed were processed using automated means.
