11. Qualitative

Applicability	Service	Reporting period	Indicator	Value
All		2025-07-01/2025-12-31	Summary of the content moderation engaged in at the providers' own initiative	Stripchat undertakes proactive content moderation to ensure compliance with platform rules and legal obligations. This includes preemptively reviewing flagged content, using internal reporting mechanisms, and monitoring categories of content that are high-risk for child safety, sexual exploitation, or user harassment. Moderation efforts are both reactive (responding to reports) and proactive (algorithmically or manually flagged content), with a focus on preventing harmful content from being published or spread on the platform.
All		2025-07-01/2025-12-31	Meaningful and comprehensible information regarding content moderation engaged in at the providers' own initiative	The platform publishes reports and policy statements detailing its moderation practices, highlighting the types of content monitored, thresholds for action, and typical response times. Users are informed of reporting mechanisms, and transparency reports provide aggregated statistics on takedowns, warnings, and account actions. These disclosures aim to make moderation practices understandable and accountable to both regulators and the public, providing clarity on how decisions are made.
All		2025-07-01/2025-12-31	Qualitative description of the automated means	Automated content moderation relies on a combination of machine learning classifiers, natural language processing (NLP), hashing services for identifying known harmful url links and images, and image/video recognition tools. These systems detect patterns indicative of prohibited content, including CSAM, abuse, sexual exploitation, hate speech, and other policy violations. Automation serves as the first line of defense, flagging content for human review and enabling large-scale monitoring that would be infeasible with manual effort alone.

All		2025-07-01/2025-12-31	Qualitative description of indicators of accuracy and possible rate of error of automated means	The accuracy of automated moderation tools is assessed via metrics such as precision, recall, and false positive/negative rates. While these systems are effective at flagging obvious violations, they may misclassify contextually nuanced content, leading to either over-blocking (false positives) or under-blocking (false negatives). Continuous KPI monitoring of the moderation team, tuning and benchmarking is used to minimize errors and improve reliability over time.
All		2025-07-01/2025-12-31	Specification of the precise purposes to apply automated means	Automated tools are used to detect and flag content for prompt review, prioritize high-risk content, support trend analysis, and maintain compliance with legal obligations such as the DSA. Their primary objectives are protection of users, child protection, preventing the distribution of illegal sexual and other content, hate speech, abuse, revenge porn, bestiality, promotion of self-harm, substance abuse, non-consensual imagery and other violations. and maintaining community standards efficiently across a high-volume, user-generated platform.
All		2025-07-01/2025-12-31	Safeguards applied to the use of automated means	Safeguards include 100% and 24/7 human oversight on flagged content, regular review and re-training of algorithms, and a multi-tiered escalation process to ensure critical decisions are reviewed by trained moderators. Users are provided appeal mechanisms, and any sensitive decisions involving taking any restrictive action (e.g., account suspension) are never automated. Additionally, monitoring of algorithmic performance and quality assurance of the moderation activities ensures that accuracy does not degrade over time.
Only for VLOPs		YYYY-MM-DD/YYYY-MM-DD	High-level description of the content moderation governance structure	N/A
