

Digital Safety Transparency Report – Microsoft 365 Services

Issue Date: February 2025

Reporting Period: February 17, 2024 – December 31, 2024

Issued By: Experiences + Devices Group

Introduction

Microsoft 365 Enterprise (M365) is a comprehensive, subscription-based service designed for organizations to enhance productivity, collaboration, and security. M365 comprises of a catalog of online services, including Exchange, Teams, and Office applications, that operate under a common authentication, policy, operations management, and commercial framework.

For M365, Microsoft is a data processor, and our customer is the data controller. Microsoft can only process Customer Data¹ as instructed by the customer. Customers provide data processing instructions through the [Product Terms](#) and [Microsoft Products and Services Data Protection Addendum](#) (DPA), product documentation, and their use and configuration of the service. Therefore, Microsoft does not engage in any content moderation by its own initiative.

This Transparency Report is responsive to the obligations under DSA Article 15(1), Article 24(1), and Article 42(2)-(3). This Report provides information regarding the following topics as they pertain to the European Union:

- Content Moderation at Microsoft's Initiative
- Content Moderation & Automated Systems
- Content Moderation following a User Report
- Government Requests

Content Moderation at Microsoft's Initiative

Microsoft provides the information below in response to DSA Article 15(1)(c). This section reports data regarding content moderation M365 engaged in on its own initiative, absent a user report.

M365 did not engage in content moderation as defined by the DSA on its own initiative during the reporting period. Microsoft solely acts as a data processor on customers' behalf and can only process Customer Data as instructed by the customer.

Content Moderation & Automated Systems

Microsoft provides the information below in response to DSA Articles 15(1)(e) and 42(2)(c).

During the reporting period, M365 did not use automated means for the purpose of "content moderation" as that term is defined by the Digital Services Act.

Content Moderation following a User Report

Microsoft provides the information below in response to DSA Articles 15(1)(b)-(c) and 41(2)(a)-(b).

¹ Customer Data means all data, including all text, sound, video, or image files, and software, that are provided to Microsoft by, or on behalf of, customer through use of the online services including M365.

As a data processor under M365, Microsoft does not have a direct relationship with the M365 customers' end users and M365 does not include public websites. As a result, the end user would provide any report related to content in the service directly to their IT administrator who would then either resolve the concern in accordance with their organizational policies or, if assistance from Microsoft is believed by the customer to be required, reach out to Microsoft through standard customer support channels. In the event an M365 end user contacts Microsoft directly through the Microsoft corporate [web form](#), we provide detailed instructions to them about contacting their organization's IT administrator for questions related to their data. Therefore, Microsoft did not receive any User Report for the reporting period.

Government Requests

Microsoft provides the information below in response to DSA Article 15(1)(a).

M365 received 0 (zero) orders from government authorities to act against alleged illegal content during the reporting period.

Member State	Total Government Requests	Request Granted
