

Türkiye

Transparency Report for User Applications

under Law no. 5651

July 2023

1. GENERAL OBSERVATION¹

[Overview of Facebook's content moderation policies and reporting forms.](#)

Meta Platforms, Inc. which provides the Facebook service for users in Türkiye, recognizes how important it is for Facebook to be a platform where people feel empowered to communicate, and we take our role seriously in keeping abuse off the service.

First, we maintain a robust set of policies, including the Community Standards and Advertising Standards, that define what is and isn't allowed on Facebook. These standards apply to content worldwide and are integral to protecting both expression and personal safety on Facebook.

Our [Community Standards](#) prohibit a wide range of objectionable or harmful content, including content that:

- Violates someone's privacy and/or image privacy rights
- Is considered bullying or harassment
- Promotes violent and criminal behavior
- Threatens the safety of others
- Is considered hate speech

¹ This report contains various links to Meta's Transparency Center. Pages in the Transparency Center are viewable in Turkish by toggling to the Turkish Language option that appears in the top right corner of the [Transparency Center home page](#).

- Is considered graphic violence
- Is considered spam

The Community Standards are created by a global team with a wide array of backgrounds, including those who have dedicated their careers to issues like child safety, hate speech, and terrorism. This team regularly seeks input from outside experts and organizations to help balance the different perspectives that exist on free expression and safety, and better understand the impacts of our policies on different communities globally.

People who use Facebook can report Community Standards violations in a variety of ways, including through an option appearing with each piece of content. When content is reported through these tools, our content reviewers enforce these standards using comprehensive guidelines, which ensures that decisions are as consistent as possible. People who use Facebook can report Community Standards violations in a variety of ways, including through an option appearing with each piece of content. We also use proactive detection technology to help identify and, in some cases, automatically remove certain types of potentially violating content, including terrorist content and child exploitation imagery before it is reported to us.

Our Advertising Standards provide policy detail and guidance on the types of ad content we allow and prohibit. Our Advertising Standards also provide guidance on advertising behavior that may result in restrictions being placed on a business account or its assets (i.e., an ad account, Page, or user account). The full set of advertising policies can be found [here](#).

Second, we allow people to report content they believe violates their intellectual property rights, including copyright and trademark via [Intellectual Property Reporting Forms](#) that are available to users in Türkiye.

Third, pursuant to the Law no. 5651, users in Türkiye can report content on Facebook that they believe violates Articles 9 and 9/A of the Law no. 5651 using a specific [reporting form](#). This form also informs users how to report other issues that they encounter on Facebook, including hacked accounts, impersonation, privacy violations, and fake accounts. Users in Türkiye can access this form through a dedicated [Facebook Help Center Page](#).

2. REPORTING MECHANISMS/CRITERIA

Description of the mechanisms for submitting applications under the Law no. 5651.

People in Türkiye submit applications under the Law no. 5651 using Facebook's dedicated [reporting form](#). This form has been in place since March 25, 2021. So that we can properly evaluate the application, people are prompted to provide the following information in our dedicated application form:

- Complete contact information, including whether the reporter submits the application on behalf of themselves/their organization or is an attorney or other representative

authorized to report on behalf of a client

- Links to the specific content on Facebook that is the subject of the report
- Section(s) of the Law no. 5651 under which the application is made
- Why these statements or images are alleged to violate Articles 9 and/or 9/A
- The applicant's full name

Everyone in Türkiye (users and non-users) can access this [form](#) from our dedicated [Help Center Page](#) and submit an application by clicking “Send” once all required information is filled out in the Form. In addition, the Help Center Page is searchable via the Help Center search bar.

Once an individual has completed the form described above and clicks “send,” their application automatically reaches us through an internal review tool – no additional action is required by the reporting party.

3. DETAILS RELATED TO THE USE OF THE REPORTING FORM

Statistical and categorical information about the reporting channel and summary of our actions.

- Between January 1, 2023 and June 30, 2023 Meta Platforms, Inc. has received a total of 227 applications through the dedicated Facebook reporting form.
- 66 of these applications were duplicative of prior applications - i.e., the same content was reported multiple times - in some cases, dozens of times by the same person - and we therefore have excluded these applications from the numbers below.
- 113 of the 161 remaining applications reported entire Facebook profiles rather than specific pieces of content.
- After making a careful assessment, we concluded 34 of these 113 reported contents were violating and we removed such content from our platform.
- Our turnaround time to review all of the 227 applications was less than 48 hours in all cases.

4. MEASURES FOR EQUAL TREATMENT OF USERS

Facebook is a global community, so the [Facebook Community Standards](#) apply equally to everyone, everywhere and to all types of content. These policies are based on feedback from people and the advice of experts in fields such as technology, public safety, and human rights.

Our reviewers enforce these standards using comprehensive guidelines, which ensure that decisions are as consistent as possible and that users are treated equally and impartially.

5. USER CONTROLS

Summary of policies and tools products and resources.

We believe that users should be empowered to customize their online experience and be given tools and resources to help keep themselves safe on the platform.

- **Ranking Transparency & Controls:** We want people to better understand why they see certain posts and ads in their Feed and be able to decide if they want to continue seeing those posts or ads. Since 2014, we have introduced tools to explain how users' past interactions impact the ranking of posts in their Feed. A full list of ranking tools, products, and resources can be found [here](#).
 - [Why am I seeing this post?](#) helps people understand and more easily control what they see from friends, Pages, and Groups in their Feed. It explains how people's activities impact the ranking of content in their Feeds (e.g. if the post is from a friend, Page or Group the user follows), as well as what other information influences the order of posts (e.g. how often the user interacts with a specific type of post like videos, photos, links). This tool also provides shortcuts to controls, such as See First, Unfollow, Feed Preferences, and Privacy Shortcuts, to help users personalize their Feed.
 - [Why am I seeing this ad?](#) allows people to see how factors like basic demographic details, interests and website visits contribute to the ads that are shown in their Feeds. There are also additional details about when information on an advertiser's audience list matches a person's profile.
- **Feed Ranking Controls:** Users can control what they see in their Feed through the following tools.
 - [Feed Preferences](#) provides a suite of tools that allow people to manage what they see in their Facebook Feed, including the ability to unfollow people, snooze a particular account, or prioritize Favorites.
 - [Favorites Feed](#) allows users to control and prioritize posts from friends and Pages they care about most. By selecting up to 30 friends and Pages to include in Favorites, their posts will appear higher in ranked Feed and can also be viewed in a separate feed populated exclusively with posts from a person's "Favorites".
 - [Most Recent Feed](#) allows users to see content sorted in their Feed by chronological order with the newest post first.
 - [Feed Filter Bar](#) allows users to alternate between different Feed experiences - the algorithmically ranked Top Posts Feed, the chronological Most Recent Feed, or the Favourites Feed.

6. REPORTING MECHANISMS/CRITERIA

Explanation on how the algorithm works in Feed.

The posts that users see in Feed are ranked based on what we believe will be most valuable to users. Feed is largely comprised of posts from the friends, groups and Pages users have chosen to connect with. Because most people have more content in their Feed than they could possibly browse in one session, we use an algorithm to determine the order of all the posts users could see. To prioritize the most meaningful posts at the top of your Feed, the algorithm works in four steps:

- **Inventory:** The first item the algorithm considers is the total set of posts a user could see when they open Facebook. This includes all the posts shared by the people the user connected to as 'friends', the Pages that the user follows and the groups that they have joined, interspersed with ads, and recommended content that we think will be relevant to you based on the users Facebook activity.
- **Signals:** Then, for each of these posts, the algorithm considers multiple factors such as who posted it, how the user has previously interacted with that person, whether it's a photo, a video, or a link, and how popular the post is based on things such as how many of the users Friends liked it and Pages that re-shared it. All these factors are called signals.
- **Prediction:** From there, the algorithm uses these signals to make a series of personalized predictions about each post based on how likely it is to be relevant to a user: for example, whether it's from your friends or family, how likely you might be to comment on it, how likely it is to foster a [meaningful interaction](#), how likely you might be for a user to find it on their own or if it contains a quality indicator (if a piece of news is [original content](#), the algorithm assigns it a higher personalized relevance score, and it will often appear closer to the top of a user's Feed). We also run a number of surveys asking people whether a post was "[worth your time](#)", and based on those survey responses, we predict how likely people are to find a post worthwhile. Posts that are predicted to be more worthwhile are shown higher up in Feed.
- **Relevance:** Lastly, the algorithm calculates a relevance score for each post in a user's inventory based on these signals and predictions. Posts with higher scores are more likely to be interesting to a user, so they'll be placed closer to the top of the user's Feed, and posts with lower scores will be closer to the bottom.

Conversely, there are some kinds of posts that people have told us they don't want to see or are broadly understood to be harmful, so we strive to remove content from Facebook altogether when it poses a real risk of harm, such as graphic violence, hate speech or fake COVID cures. Therefore, Facebook has [Community Standards](#) that prohibit harmful content, and why we invest heavily in developing ways of identifying and acting on it quickly. We also use Feed ranking to [reduce the distribution](#) of posts that may contain content that people find

objectionable, but don't necessarily meet the bar of removal under our policies. If a post is likely to contain misinformation, a sensationalized health claim or clickbait, for example, it will receive a lower value score and appear lower in Feed as a result. We monitor for new types of problematic content such as these and develop new algorithmic levers to detect and enforce against them. However, we are confronted by the challenges that come with a platform used by an ever-growing population. As such, our teams work hard every day to adapt and address any gaps that may arise in a thoughtful and deliberate way.

7. ADVERTISING TRANSPARENCY

We have set out our advertising policies in Section 1 (General Observations), which sets out the types of ads content we allow or prohibit. In addition to these policies, We maintain an [ads library](#) that provides advertising transparency by providing a comprehensive searchable database of all ads currently running on Facebook.

Additionally as set out in Section 6 (Information on User Controls), when users see an ad, they can select [Why am I seeing this ad?](#) to view details on why the user is seeing a specific ad in their feed.
